Abstract

The present invention relates to a zip seal, comprising a coupling seal with third and fourth sealing elements on the top sides of the first and second sealing strip and a zip slide, comprising a compression end and a separating end, having a separating element. The invention further relates to a docking seal, comprising a coupling seal with third and fourth sealing elements on the top sides of the first and second sealing strip as well as a coupling slide element and a zip slide, if necessary. In addition, the invention relates to docking systems, formed from two inventive zip seals or two inventive docking seals as well as multiple coupling seals and multiple docking devices, containing at least one inventive zip seal and/or one inventive docking seal.
